

#1 (a): $\text{targ } L_1 = 1 + \text{Miss Ratio} \times \text{targ } L_2$

$$7 = 1 + \frac{1000-900}{1000} \text{targ } L_2$$

$$\Rightarrow \text{targ } L_2 = 60$$

(b): $\text{targ } L_2 = 60 + \text{Miss Ratio} \cdot t_{\text{memory}}$

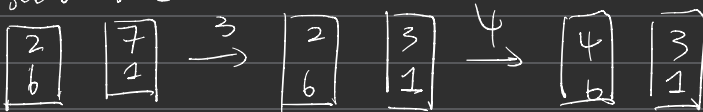

$$60 = 60 + \text{Miss Ratio} \cdot 200$$

$\Rightarrow \text{Miss ratio} = 0$, 故访问 0 次内存

(c): $\text{CPI} = 1 + 0.2 \times 6 = 2.2$

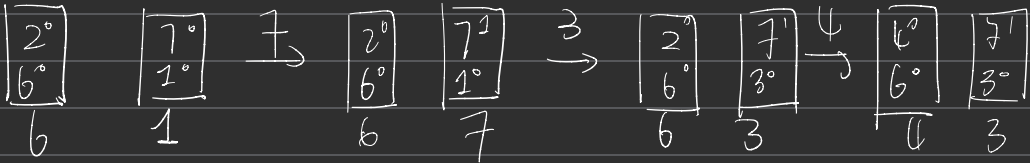

#2 (a): $4 \div 2 = 2$
